DESCRIPTION

Amorphous (non-crystalline) in structure and composed primarily of aluminum silicate, pumice is a naturally calcined volcanic glass foam consisting of highly vesicular strands permeated with tiny air bubbles. It is these frothy, friable glass vesicles that, when carefully refined to various grades, give pumice its unique and infinitely useful qualities.

Safe to Use. No hazardous crystalline structure: testing for crystalline silica (airborne particles of respirable size) finds no measurable Crystalline Silica (SiO₂) present. Free of heavy metals, pesticides, nano-particles, allergens.

* **Low Heavy Mineral (LHM).** LHM-designated grades receive additional processing to remove obsidian and other igneous heavier-than-pumice (non-pumice) minerals.
