## DESCRIPTION

Amorphous (non-crystalline) in structure and composed primarily of aluminum silicate, pumice is a naturally calcined volcanic glass foam consisting of highly vesicular strands permeated with tiny air bubbles. It is these frothy, friable glass vesicles that, when carefully refined to various grades, give pumice its unique and infinitely useful qualities.

## GRADE APPLICATIONS

**Used for:** concrete pozzolan, tumbling media, pumice stones (cosmetic), tile manufacturing, circuit board prep, fracking sand.

## PACKAGING OPTIONS

- 45 lb sacks (palletted)
- 2000 lb super sacks (palletted)
- Bulk shipped in pneumatic rail car or tractor trailer

## DISTRIBUTOR NETWORK

We have stocking distributors in 23 countries on every continent except Antarctica, allowing us to deliver pumice quickly and economically worldwide.
