DESCRIPTION
Amorphous (non-crystalline) in structure and composed primarily of aluminum silicate, pumice is a naturally calcined volcanic glass foam consisting of highly vesicular strands permeated with tiny air bubbles. It is these frothy, friable glass vesicles that, when carefully refined to various grades, give pumice its unique and infinitely useful qualities.

GRADE APPLICATIONS
Used for: air filtration media, soilless grow media.

PACKAGING OPTIONS
• 1 lb or 1 kg resealable bags
• 35 to 75 lb [15.8 / 34 kg] bags (palleted)
• 1000 to 2200 lb [454 / 998 kg] super sacks (palleted)
• Bulk shipped in rail car or tractor trailer

DISTRIBUTOR NETWORK
We have stocking distributors in 23 countries on every continent except Antarctica, allowing us to deliver pumice quickly and economically worldwide.
